PROJECTS

Bringmark Hrms

Bringmark hrms is built from scratch using react js and ant design.

Bringmark Every employee can set attendance in hrms. In this I created the backend on nodejs and frontend on react.

In Bringmark HRMS, every employee first adds the account and then after one month the salary is transferred through open bank integration. This process has been implemented.

Bringmark also submits every employee's daily work report in hrms. Process has been implemented and CMS has also been implemented.

Sudo24 App

Sudo24 app is built on React Native and its stable latest version is 0.72

Sudo24 app also has roles of teacher and student in which the student will buy the course and the teacher will upload the course.

Wallet option is kept in the teacher panel which is being controlled from the admin panel so that the student and course and the teacher will upload the course.

There is a wallet option in the teacher panel which is being controlled from the admin panel.

Blog and reels have also been created in Sudo 24 app.

Bringmark

I have implemented this website from scratch using React and Mui.

This website has been designed in 3D for user attraction.

this project there is a order page with status of order for costumer and a separate page of both costumer and merchant.

Cloudnary has been used in this website which has been implemented to make the website fast.

Sudo24 Admin Pannel

Sudo24 has also implemented daily blog updates in the admin panel so that the website And users keep doing it continuously on the app.

MAHARSHI DAYANAND UNIVERSITY

world college of technology and management

05/2019 - 05/2023, *b.tech in computer science engineering*

BOARD TECHNICAL EDUCATION

chhotu ram rular institute of technology

07/2017 - 07/2020,
diploma in engineering

CENTRAL BOARD OF SECONDARY SCHOOL

govt.coed senior secondary school

07/2015 - 07/2016, *10th*

SKILLS

HTML Css Javascript React

Redux ToolKit mongodb

Nodejs Material UI Git

Express js React native Github

WORK EXPERIENCE

Bringmark

(09/2022 - present)

I work on a full stack developer role at Bringmark.

I have implemented this Bringmark website.

I am leading the team in Bringmark.

Here I used to manage the MongoDB database in which I used to analyze and fix the data of Developers and Clients.

This is where I used to do Continuous Integration when I had to do a live project.

Also implemented sudo24 admin panel plan update which allows teacher courses and student course price updates

sudo24 adminpanel all teacher and student data is shown delete and update tab live time data is implemented and teacher and student how many times payment is made is also implemented

Sudo24 AdminPanel has implemented all teacher and student wallet control management in which admin can update teacher and student wallet money and send wallet money to multiple users simultaneously.

Add, update, delete teacher courses are also implemented on sudo24 admin panel.

Add, update, delete teacher courses are also implemented on sudo24 admin panel.

Sudo24 Website

I have created Sudo24 website from scratch using react js and mui..

Authentication is used in this website through which teachers, students and admin panels have access.

Teacher can upload courses in Sudo 24 website, student can buy courses and control the website from admin panel.

Sudo 24 website, I have also used Nodejs so that the teacher's courses are available from our backend.

Blog Website

when the user go to add new blog then it will redirect to login and signup form the user can post the blog.in

This portal site should present a main page from which people's blogs can be accessed .it should show the most recently updated blogs

A client for creating and updating blog entries

Soft Skills

Problem solving
Creativity
Descision making

Languages

Englis
h Hindi
